The Open Source Workflow Engine for Human-Centric BPM.

Human-centric business process management means supporting human skills, activities and collaboration in a task-oriented manner. With **Imixs-Workflow** you protect and securely distribute business data within an event-driven BPM architecture based on the **BPMN 2.0** standard.

Open Standards

Imixs-Workflow is based on an open, scalable, transactional and robust architecture. Imixs-Workflow supports open standards and runs on any modern Application Server. Read more...

Event-Driven BPMN 2.0

Imixs-Workflow supports the BPMN 2.0 standard. With the event-driven modeling concept, human-centric workflows can be easily designed and business logic can be changed at run-time. Read more...

Secure Business Data

The Imixs-Workflow engine supports a powerful multi-level security concept with a fine-grained access control for any kind of business data. Security is defined in BPMN and need no longer be hard coded. Read more...

Microservices & Docker

Imixs-Workflow provides a modern and flexible Rest Service API to be used in any application architecture. Imixs-Workflow can also run as a Microservice in a Docker Container. Read more...
